

**The power's on.**

Everything is running smooth.  
Positive lights across the board.  
With the power on, progress happens.  
Things get done. Learning. Business.

**Peace of mind.**

WE'RE ENER G TEST, a company that specializes in the testing, servicing and maintenance of electrical power

systems. In situations of startup and acceptance testing, performing preventative maintenance and system checks, or responding to your unexpected power outages, EnerG Test is there, with the experience to meet the needs and requirements of your electrical power system. System reliability is key to your business. Uptime equals

a strong bottom line. EnerG Test understands this and strives to become your system reliability partner, creating a custom testing and maintenance program that addresses the specific needs of your power system – not just the equipment but your entire power process. Using diagnostic testing techniques, predictive testing and analysis (which can indicate the development of possible future problems), equipment performance analysis and maintenance agreements, EnerG Test works to deliver optimum system reliability and performance while reducing the chances of costly unplanned power shutdowns. Reliable power system solutions. That's our business. But make no mistake; we don't just present solutions. EnerG Test is a proactive service company. With our resources we can bring together all the necessary disciplines required to implement your action plan, whether we're responding to a sudden outage or performing scheduled service.

# TESTING & SERVICE

## EnerG Test's Capabilities include:

Generator & Motor Testing  
Transformer Testing  
Cable Testing  
Switchgear,  
Circuit Breaker  
and Disconnect  
Switch Testing  
Ground Grid Measurements  
Insulating Fluid Testing  
Protective Relay and Metering Tests  
Auxiliary and Control System Testing

## Our full range of Service Offerings include:

Circuit Breaker and Switchgear  
Overhaul, Refurbishment  
and Upgrade  
Infra-Red Analysis > > > >  
Engineering Studies  
Cable Fault Locating  
Disturbance & Power Quality Monitoring  
Fluid Handling and Retrofill Capabilities

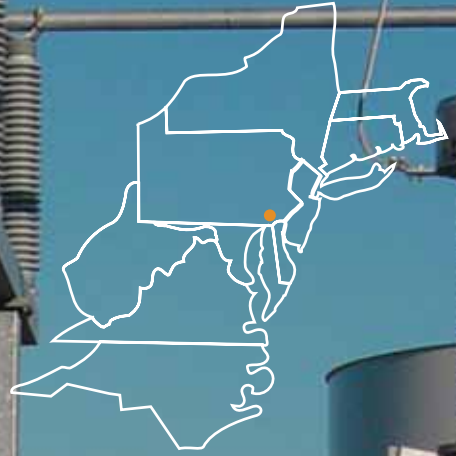

*All of EnerG Test's services are performed in accordance with applicable standards and guidelines from ANSI/IEEE, NETA, NFPA, ACEA and Doble.*

Our organization is made up of highly trained, highly qualified personnel. Our technicians go through many hours of specialized testing and service training. In addition, all of our job site personnel are required to participate in electrical safe-work-practice training, as well as instruction in OSHA PINS, confined space, fall protection and first aid/CPR. But it's our individual technicians' attitude that separates EnerG Test from the crowd. Their attitude translates into a business reputation that is based upon safety, quality and professionalism with job installations recognized by dependability, efficiency and thoroughness.

> > > > EnerG Test has the resources, the experience and the attitude to properly execute and manage your entire testing, service and maintenance program. Let us review your electrical power system needs and provide you with a no-charge, no obligation estimate of services that will keep your power on.

Our service area extends from  
New York State to North Carolina.
